## **SMART**LIGHT

# Multi-purpose Tower Light

SmartLight is the first programmable LED signal tower light. With a rich color spectrum, adjustable light intensity and the ability to program individual configurable segments, the Balluff SmartLight can display numerous machine or process status information - instantaneously. The mode of operation can be switched based on programmed conditions so that the single SmartLight can be used as a multi-function tower indicator.

### Stack Light Mode

- 1-5 segments
- Programmable customizable colors for each segment
- Blinking mode with programmable frequency

### Level Mode

- Individual LEDs light up to display level Level input mapped directly to SmartLight
- Programmable customizable colors for level indication

### Run Light Mode

- Complete module displays the running light effect
- Programmable colors of running segment and background
- Programmable speed for running segment

### Flexible, Scalable, Intelligent Stack Light!

The SmartLight offers three programmable modes of functionality: segment or stack light, level indication, and run light mode. Additionally, a SmartLight with a buzzer option is available for audible feedback

SmartLight's segment or stack light mode is feature-rich compared to a standard stack light. The number of segments and color for each segment can be programmed and changed on demand. Individual segments can be set for blinking or flashing mode, and the frequency of blinking can be programmed as well.

When using the SmartLight as a level indicator, the resolution of input level can be mapped from an 8-bit to a 16 bit integer number.

The input could be a position of an object on a linear track or liquid level in a tank. Colors of the LEDs can be changed to signify the importance of the level as well. For example, if the level or the pressure in the tank is closer to the extreme, the SmartLight will display in red.

SmartLight, in a run light mode, allows using different programmable colors for the background and for the running segment. The length of the running segment and the speed of the running mode is configurable and can be switched to express different conditions. As with any other mode, the intensity or brightness can be configured to ensure noticeable performance.

### WARNING

- Read, understand, and follow warnings and manual Failure to do so could result in serious injury or death
- NEVER USE AS A SENSING DEVICE FOR
- PERSONNEL PROTECTION Dees NOT include self-checking redundancy circuitry required for use in personnel safety applications Dees NOT meet OSHA and ANSI standards for
- point-of-operation device: Balluff, Inc. · www.balluff.com · 1-800-543-8390

# SMARTLIGHT Advantages

### SmartLight Architecture

Reduce Complexity

#### Reduce Complexity $\rightarrow$ Reduce Risk

- Single part number, tamper resistant design
- Programmable colors, intensity, and blinking
- Configurable modes of operation with on-demand change of mode
- Standard M12 sensor cable no complex wiring
- Programmable buzzer for continuous chopped or beeping sounds

Generic Stack Light

Balluff LED SmartLight

## IO-Link Distributed Modular I/O

IO-Link is a fieldbus and manufacturer independent communications standard defined by the International Communications Standard IEC 61131-9. IO-Link enables seamless integration of a variety of actuators while maintaining scalability for future adaptability in the controls architecture. IO-Link is universal and adaptable to any major industrial network protocol, such as EtherNet/IP, PROFINET, EtherCAT, CC-Link IE, DeviceNet, PROFIBUS, or CC-Link.

A multitude of actuators or devices can be connected without complex wiring. Devices include discrete I/O (e.g., prox switches), analog I/O devices, smart sensors (e.g., pressure sensor, linear position sensors), and specialty devices (e.g., RFID, non-contact connections) IO-Link has built in scalability to add more devices to the existing network without adding more network nodes in the architecture - thus providing ease of operation and a cost-effective solution for automation.

#### Smart Light

- Stack Light Mode: 1-5 zones
- Level Mode: high/low level

#### **IO-Link Masters**

4 port and 8 port versions

- Available from 2" to 180"

### **SMART***LIGHT* – LED Signal Tower Light with IO-Link For signaling operating states

## IO-Link Masters

Balluff offers IO-Link master blocks for all major networks and fieldbus protocols. With built-in expandability, IO-Link blocks can significantly increase the I/O count served by a single network node. Each IO-Link port is configurable to be used as either IO-Link or as input or output – providing flexibility for scalable and modular controls architecture.

## Accessories & Connectivity

To make the most out of your investment, Balluff offers an optional array of accessories and connectivity solutions perfectly tailored to the SmartLight.

- IO-Link USB converter enables connecting the SmartLight to PC
- Free configuration utility to configure and test the SmartLight as well as other IO-Link devices available from Balluff
- Ease of diagnostics, troubleshooting and configuration off-line
